SIMPLIFIED AUTOMATIC TYRE DEMOUNTING DEVICE, AND TYRE REMOVAL MACHINES EQUIPPED THEREWITH

ABSTRACT

and the second

Automatic device for demounting a tyre from the relative wheel rim, comprising, for supporting the wheel rim complete with tyre, rotary means associated with a frame which supports a demounting tool and is associated with means enabling it to be positioned in a tyre bead seeking and gripping position in which it is perpendicular to the axis or orientated towards the centre of the wheel rim, and in a position for extracting said tyre bead from the wheel rim in which it is perpendicular to the axis or orientated in the opposite direction, said tool positioning means comprising a bar, to the end of which said tool is hinged in an intermediate position, and a connecting rod which at one end is hinged to one end of said tool, and at the opposite end is connected to said bar by a lever linkage, said bar being connected to means for advancing it and withdrawing it
